32A	Backup Area	19.4 Acres		300T	1000#					

(1) Note all cranes on Wharves 10 and 11 must place outriggers on shearwalls (marked), and use steel plates. Also note that there is no load capacity on the backup areas on Wharves 12 to 15. Any crane needing access to the wharf apron at those wharves must use the crossover roads at CD11 or CD16 to gain access to the apron.

(2) Note all 200 to 300 ton cranes on Wharf 23 shall use steel plates under the crane outriggers.

IT IS RECOMMENDED THAT CRANES OVER 250 TONS SET UP WITH THE OUTRIGGERS OVER SHEARWALLS OR BEAMS AT ALL WHARVES

Railcar Axle Loading is based on a single standard 8-axle railcar with a MODEL MK1500-D, (254.8 Kips), CLASS B-B Locomotive. Final approval is required by PHA Engineering Department for all loading requests. Submit requests to PHA Operations Department.

Special Note: Current soundings posted are based on the least draft in the series of soundings taken at each facility. Complete sounding charts may be made available upon request. Soundings have been adjusted to reflect clearance at Mean Low Tide. Actual clearance may be different based upon the current tide conditions. Houston Pilots will make the final determination if a vessel can be safely moored at any facility.
